To the Editor of the Journal : In the reply of the Editor of the American Farmer to my letter of the 26th October last, he refers to his Essay in the October number, on composts, etc., of the Country. I am, very truly, &c.,

WM. A. BERRY.

From the American Farmer for October, 1852. Improvement of worn-out Lands-Modes of Formetable Matters, &c.

MINTONSVILLE, N. C., July 22, 1852. now it is quite dry. I am now preparing for heavy here observe, that, be the solvent used what it n loads,) and I wish you to inform me which will be best, to compost it or haul it into the field and spread it, and then apply lime or ashes-which will be best. and what quantity per acre? . The land is stiff and poor, bringing, without manure, 2 bbls. per acre.-If I compost, it will double the expense, because I willing to undertake it. In making my compost heaps, I have been in the habit of putting my lime bushels ashes, and intend purchasing 2000 bushels shells for my land, and will apply it by your direction. The lime I intend for another place; the growth is red and white oak, pine, gum, holly, &c .. mostly new land, and will bring 5 to 7 bbls per acre; subsoil stiff clay. Any information you can give will be thankfully received.

A. SMITH JORDAN.

Replies by the Editor of the American Farmer.
METIODS OF FORMING COMPOSTS. There is so much of the true spirit of generous enterprize in the foregoing letter, that it gives us promptness -on the latter matters. pleasure to respond to the inquiries of its writer, as he who will undergo the labor and expense of raising and composting from five to ten thousand loads of marsh mud, with the view of converting it into m Arabic, 30 lbs Alexandria Senna, 20 lbs. E. J. Senna, fertility, deserves to receive all the lights which ex- rivers, bays, creeks and estuaries, which a mud" is properly composted, we do not entertain the which they have been subjected." scintillation of a doubt. He says :-

Our correspondent informs us, that he has 2000 bushels of ashes; with that quantity, if they be of the hardwoods, are unslaked, and have been preserved from the weather, he may excite 1000 loads of his marsh mud into the incipient state of decay We say a thousand loads, because, independent of the potash which they contain-which will amount cient agents at work to aid in carrying on the proyour DIARRHEA CORDIAL, as well as your Anolyne Cherry cesses of fermentation, putrefaction, and, ultimately, decomposition. In forming the compost heaps we would apportion to every twenty loads of marsh mud I bushel of plaster, and if the mud was not salt marsh mud, we would add 2 bushels of salt, in solution. This would expedite fermentation, and aid the plaster, in preventing loss from the escape fections of the system. In its actions it ALLAYS NAUSEA and of the ammoniacal gases, render the mass much sooner fit for use, and make it intrinsically more valuable; for ammonia may be considered as the true measure of the value in all organic manures and such being the case, every pains should be taken to prevent it being lost by evaporation -Theory would require a larger quantity of ashes to be used as the solvent of the body of mud named but we apprehend that the estimate was based upon the quantity of potash known to exist in a given quantity of ashes; there are, however, as we have before premised, other substances in ashes, which are active solvents, as Lime and Soda; the first existing in much larger quantity than does the potash. while there are 1000 lbs. of soda in the 2000 bushels of ashes, if unslaked of our correspondent, if made from Red Beech wood, and 2000 lbs. if made from oak-the potash may be estimated at about 11,000 lbs., and the lime at upwards of 12,000 lbs. or to reduce the lime into bushels, if made from the first named wood, it may be computed at 25 per cent., while, if from the latter, at upwards of 17 per cent. Again, - Magnesia, which notably abounds in all ashes, possesses the property of a solvent, in common with lime, potash, and soda, though in a less degree; but sufficiently so to exert a powerful

It will be seen by the above tables, that the pin-

family of wood are not so rich in lime or potash, as the two hard wood ones, the analyses of whose ash es are given; yet that they are richer in potash and soda combined, and that the mean per centage etc., which I herewith hand you for publication, if of magnesia in the ashes of Beech and Oak. is less you conceive it useful to the Agricultural interest than that found in those of Pitch Pine. Now then. as both Potash and Soda are very active solvents, the ashes made from pitch pine are highly valuable agents in any compost heap, not only on account of these substances, but, because they are also com-paratively rich in Lime and Magnesia, both of which ing Composts-Agents for Decomposing inert Veg. are good solvents. As a whole, Pine Wood Ashes will be found an excellent ingredient in every compost heap, where the object aimed at, is the decom position of the rough inert material, which may form the base of the compost heap. But we we manuring for another year; I am getting out a each compost heap should be liberally treated large quantity of swamp mud, (some 5 or 10.000 plaster as a means of preventing the loss of the plaster as a means of preventing the loss at the volatile portions of the materials; for in all bodie usually embodied in the compost heap, there ar more or less nitrogenous matter, which is one of the great leavening principles of vegetable productions If the peat, marsh mud, or river mud, be not from formations subject to the overflow of salt wat r. we shall have to haul twice, but if it will pay, I am would combine two bushels of salt, with whatever quantity of plaster we might put upon the quantity

of compost intended for an acre. We shall now direct the attention of our correspondent, and all other readers, to the following essay, which we wrote, con amore, in January, 1851 and had inserted in the American-Artisan, published in New York, with the view that it might meet the eyes of the gentleman for whose benefit it was particularly written. The directions therein given, as to the methods of composting peat, are just as applicable to swamp mud, river, or creek mud, woods mould and leaves, woods-mould and pine shatters, and all kindred substances, as they are to the former substance; while the quantities of the decomposers will be found to act with more efficiency - with more

"For the American Artisan.

CONVERSION OF PEAT INTO MANURE. As along the whole range of the coasts of the manure, in order that he may restore his land to Atlantic States, as well as upon the margins of those ered a public benefactor, surely our correspondent as manures, becomes an object of the very last im-DATENT MEDICINES .- 4 boxes Sand's Sersaparilla, 2 is worthy of equal distinction.
